ReDesign the home page of https://rebba.net exactly like MXPlayer.in home page. And the loading speed / flow / performance of https://rebba.net should be exactly like Mxplayer.in

- Increase Performance Scores ie., increase PageSpeed Score & YSlow Score close to 100%
- Loading of images/ posters or site should be exactly like MxPlayer.in site.. Posters come one after another quickly.. till poster loads a default image will be shown with "Rebba.net" logo... as we scroll down it shows "Loading more Movies" and loads.. as shown in the above image.. (Loading Images with dummy placeholder) (In the existing site – complete site with all posters loads at once! – which should not be.. it takes a lot of time and has more size)
- **Example:** And here's the idea, fetch the first two categories on simple load and fetch others using jquery and ajax and append the div with the data one by one and in the categories that are being fetched using jquey do not get all records only get a few and similar to add onClick listeners for "<" and ">" button and append new data whenever we scroll down but always check if there is data to append else don't append
- **Home Page should load fast & perform well** for a maximum number of users at a time. Home page optimization for all kind of devices.
- Make sure all the existing functionalities of https://rebba.net work fine, after customisation / enhancing. And also on Mobile View. **Please Do not make any changes on the Menu and Mobile Menu.** Don't remove any link on the home page.. Everything should work fine. Donot Make any changes which effect other pages of the site http://rebba.net.

Make sure everything works fine in Mobile View also (it is a responsive site) – if you have any doubts while customising for mobile view, let me know.. send screenshots… I will make reference images to help.

Here is the Performance of MXPlayer.in.. After your changes Rebba.net should perform like this:
